

## Cam Lock

- Manufactured from materials of proven durability, providing a simple but solid and reliable solution for both wet and dry areas.
- Designed to work consistently through heavy use.
- Our wet area locks feature stainless steel pins, a unique solution in the industry. This ensures the locks are highly resistant to corrosion when used in high traffic wet areas. The wet area lock is available with a standard type key, or for high risk or added security, a dimple type security key.
- The dry area lock is suitable for use in gyms, shopping centres, schools etc., in fact any area where it is not working in a wet environment.
